

SMART WASTE MANAGEMENT SYSTEM FOR METEROPOLITAN CITIES

Team ID : PNT2022TMID16239

WOKWI SIMULATION

The screenshot displays the Wokwi web-based simulation environment. The left pane shows the Arduino sketch code for an ESP32 microcontroller. The code includes libraries for Wi-Fi, MQTT, and an LCD display. It defines IBM Watson IoT credentials (ORG, DEVICE_TYPE, DEVICE_ID, TOKEN) and configures the ESP32 to connect to a Wi-Fi network and publish data to an MQTT broker. The right pane shows a 3D simulation of the ESP32 board connected to an LCD display, a temperature sensor, a humidity sensor, and a gas sensor. The simulation status bar at the top right indicates a running state with a 93% completion rate. The bottom right pane shows the MQTT publish logs, indicating successful data transmission.

```
1 #include <WiFi.h> // library for wifi
2 #include <PubSubClient.h> // library for MQTT
3 #include <LiquidCrystal_I2C.h>
4 #include <Json.h>
5 LiquidCrystal_I2C lcd(0x27, 20, 4);
